

PARAGRAPH ON SAVE ENVIRONMENT

The term environment has been derived from a French word 'Environia' means to surround. The word environment means surroundings – the air, water and land on which people animals and plants live.

Environment plays an important role in healthy living and survival of life on planet. Earth is home for different living species and we all are dependent on the environment for food, air, water and all other needs. Unfortunately a large portion of environment is under threat due to human activities. We are transforming our natural environment by constructing buildings, industries and overusing our natural resources. Deforestation, pollution, climate change, acid rain, global warming, ozone depletion etc. are the biggest threat to our environment causing its degradation. Thus, it is very important to save our environment by stopping its exploitation. Planting more trees, proper waste management and minimal use of chemicals and pesticides will help in saving our environment. Pollution, of all sorts, must be controlled. In order to restore the natural balance of environment, it is vital to use the natural resources carefully. We need to work both individually and collectively to save environment.
