

# Essay on Pollution in 250 words

## Introduction

Pollution is a significant problem in our world today. It refers to the harmful presence of substances or contaminants in the environment. It causes damage to the Earth's natural balance and harms living beings. There are different types of pollution, including air, water, and soil pollution. Pollution can be divided into several categories such as air, water, soil, and noise pollution.

**Air Pollution:** This is the contamination of the air by harmful substances like pollutants, particulate matter, and gases. It mainly occurs

due to industrial processes, vehicle emissions, and natural events like wildfires.

**Water Pollution:** It is the contamination of water bodies like rivers, lakes, and oceans when pollutants like chemicals, sewage, and waste materials are released into the water. It makes water unsafe for drinking, causing health problems for people and animals.

**Soil Pollution:** This occurs when harmful chemicals, waste, or contaminants enter the soil. It can result from the use of pesticides, improper waste disposal, and industrial activities, which can negatively impact soil fertility and animal life.

**Noise Pollution:** It is the presence of loud, disturbing noises in the environment, often from sources like traffic, industries and loudspeakers. Prolonged exposure to high noise levels can lead to hearing problems and other health issues.

## **Prevention**

To curb pollution, we must act on multiple fronts. Cleaner fuels and eco-friendly transport combat air pollution. Proper waste treatment fights water pollution. Using eco-friendly products tackles soil pollution. Noise pollution can be reduced by limiting loud activities and installing sound barriers in noisy areas.

## **Conclusion**

Addressing pollution requires a collective effort in raising awareness about its impact and embracing eco-friendly practices. By doing so, we can guarantee a sustainable and prosperous future for generations to come.
