Essay on role or contribution of technology in education in 250 words

Nowadays, technology forms an integral part of the education sector. It is making learning smarter, faster, and easy. Earlier, the presence of books and teachers was substantial for students. Now, the internet gives them unlimited resources at their disposal. They can watch online videos, use apps, or read e-books to understand topics better.

Teachers use technology to present an interesting lesson. Smartboards, animations, and presentations bring learning to life. The online classes enabled people to be at home while following classes. Students can join online courses from schools and universities worldwide. Online education gained immense importance during the COVID-19 pandemic. Students attended classes from home without losing touch with their studies. Students can also take online courses and thus equip themselves with some skills useful in jobs.

Technology allows personalized learning. Students can learn at their own speed using apps and online tools. It also helps teachers save time by automating tests and assignments. Educational games and videos make boring subjects fun. For differently-abled students, technology provides tools like audiobooks and screen readers to help them learn. It promotes equality in education.

Moreover, technology has brought education to remote villages. Students in rural areas can now access quality learning materials through online platforms. Digital classrooms have also reduced the need for physical books and infrastructure. Technology also allows parents track their child's progress through apps and portals.

To sum up, technology has transformed education worldwide. It bridges gaps, supports students, and prepares them for the future.
